Dear Hiring Manager,

I am a Frontend Developer with a strong foundation in HTML, CSS, JavaScript, and React, focused on building clean, responsive, and user-friendly applications.

Through my academic work and personal projects, I have gained hands-on experience developing interactive interfaces, managing application state, and integrating APIs. I have built several projects, including a React user management system with CRUD functionality, a task management application with persistent state, and multiple JavaScript-based UI projects focused on DOM manipulation and user interaction.

In addition to web development, I contributed to the design and frontend implementation of a mobile chat application, where I was responsible for UI/UX design, layout structure, and user flows. This experience strengthened my understanding of product thinking, design systems, and building interfaces from a user-centered perspective.

I am a fast learner who enjoys adapting to new technologies and improving through practice. I am comfortable working both independently and in a team environment, collaborating with others, sharing ideas, and contributing to project goals. I take pride in writing clean, maintainable code and continuously refining my skills.

I am motivated to grow as a developer, contribute to real-world projects, and work with modern technologies in a professional environment. I am particularly interested in frontend roles where I can combine technical development with strong UI/UX focus.

Thank you for your time and consideration. I would welcome the opportunity to further discuss how I can contribute to your team.

Sincerely,

Viktor Grygoriev
